## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claim 12 is allowed.

Joglekar et. al., U.S. Patent No. 5,535,258, discloses a radio telephone interface apparatus that allows a user to quickly dial stored telephone numbers (Abstract, Column 3 Lines 11-14). A single key is pushed a number of times corresponding to the directory location associated with the stored telephone number that the user wishes to call, and said telephone number is automatically dialed (Column 10 Lines 15-49, Figs. 3-8). It is inherent that the successive key inputs (and therefore the last key input) must be maintained for a certain time interval, for if a key is depressed for a short enough interval, the processor to which it is connected will not detect said key depression. The wireless telephone of the invention has a processor, memory, and a keypad with a plurality of keys (Fig. 8).

Tiilikainen, U.S. Patent No. 5,710,810, discloses the feature whereby a given individual on the user's list may have more than one telephone number associated with him, in the context of quick dialing from a mobile telephone (Column 1 Line 62 to Column 2 Line 11).

Neither Joglekar et. al. nor Tiilikainen discloses a communication address stored in a memory location identified by juxtaposition of the numeral of the numeric input key in first and second adjacent decimal positions. No prior art reference was found that discloses this feature. Therefore, Claim 12 is allowable over the prior art.
